GUIDE TO SYMBOLS

To assist customers in selecting the correct product for their needs, we have identified the key features and displayed below for easy reference. Also, for customers peace of mind the Guarantee period for the products, outputs and efficiency information is also highlighted on each product.

CHIMNEY OR FLUE

Your choice of fire will be dictated by the type of chimney or flue you have. If you're not sure, then take a look at your roof and cross-reference it with the following guide.

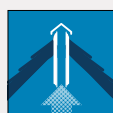

BRICK CHIMNEY (Class 1) Suitable for all fires

A conventional brick chimney is easily recognisable by a chimney stack with accompanying terracotta pot or gas terminal.

PRE-FABRICATED FLUE (Class 2) Suitable for most fires

This is an interlocking metal flue tube system easily identifiable by a metal flue and terminal on the roof and a metal flue box behind the fire.

PRE-CAST FLUE

Suitable for a wide range of slimline fires

Built from concrete or clay blocks, pre-cast flues provide a rectangular section flue. They can be identified by a ridge vent or metal flue tube and terminal on the roof.

BALANCED FLUE

Balanced flue fires vent directly outside through a horizontal co-axial pipe. An outer pipe draws air in from the outside and an inner pipe expels combustion gases.

FLUELESS

Requires no chimney, flue or access to an outside wall. Only requires a flat wall and appropriate ventilation. Flueless fires should only be used as a secondary source of heat.

*Deliveries are available for the next working day, when you place your order by 5pm Monday to Friday.

CONTROLS

MANUAL CONTROL

Simple and discreet, the control system is located behind the fires fret or trim. Once the fire is lit rotate the knob to adjust the flame height and heat output.

SLIDE CONTROL

The control system is located on the top right-hand side of the fire. Push and hold the lever down to ignite and move it up and down to adjust the flame height and heat output.

TOUCH CONTROL (ELECTRIC)

Touch control via two switches, on/off and high/low.

ELECTRONIC CONTROL

Both ignition and heat are controlled by a single rotary motion so there is no need to push down and twist the ignition to light the fire. Requires AA battery.

SEMI-REMOTE CONTROL

Light the fire using the manual control system then use the remote control handset to adjust the flame height and heat output.

REMOTE CONTROL

The remote control handset is used to light the fire as well as to adjust the flame height and heat output.
